

## Consent for vaccination against COVID-19

The Swedish Public Health Agency recommend that children who have reached the age of 12 receive the vaccination against COVID-19.

The vaccine protects against severe disease. Vaccination against COVID-19 is both voluntary and free of charge.

The vaccinations can only be given with the consent of parents/guardians.

By signing this form, you agree that your child will be vaccinated. The form must be signed by **all parents/guardians**, and the child must bring the signed form when they receive the vaccination.

It is possible to receive the vaccination without the parents/guardians' consent if the child is over 15 years old. In this case, the young person must contact the Ungdomsmottagningen in Växjö or Ljungby.

To achieve the maximum level of protection, the vaccine must be given in two doses, with an interval of a few weeks. The appointment for the second dose is booked when the first dose is given. This consent form applies to both doses.

The child needs to bring both this signed consent form and a completed health declaration at the time of vaccination.

Consent is hereby given for vaccination against COVID-19 for:

.....  
*The person's name and personal ID number*

.....  
*Place/date*

.....  
*Place/date*
